HYBRID REFLECTIVE INSULATION WITH ENCAPSULATED FIBERGLASS CORE

Thermal and acoustic reflective insulation with fiberglass core in the form of rolls, covered with a low emissivity surface that acts as a radiant barrier, vapor barrier, moisture control, and provides excellent mechanical strength.

Hybrid insulation is designed for use within roofing systems. The vapor barrier helps control the amount of moisture that passes through the insulated wall from the interior to the exterior.

It can be applied to metal roofs, effectively reducing heat flow to increase energy savings by lowering the air conditioning load in heated areas.
